

8-Week Plan — Code Editor + Web Dev Fundamentals

Two repos, built in parallel:

- `webdev-learn` — your structured notes, exercises, and resources (the textbook)
- `electron-editor` — the actual desktop code editor app (where you apply what you learn)

Each week, the concept you learn in `webdev-learn` is immediately applied to `electron-editor`. Nothing stays abstract.

Phase 1 — Foundations (Weeks 1-2)

Week 1 — Setup

`webdev-learn`: HTML & the web

- README with learning roadmap
- `01-html/` — tags, structure, semantics
- Exercise: build a profile page
- Resources & MDN links

`electron-editor`: Repo scaffold + hello window

- Init repo, `.gitignore`, README
- `npm init` + install Electron
- `main.js` — open a blank window
- `index.html` — "Hello Editor"

Week 2 — Style

`webdev-learn`: CSS basics

- `02-css/` — selectors, box model, flexbox
- Cheatsheet: common properties
- Exercise: style your profile page

`electron-editor`: Style the editor shell

- `styles.css` — dark theme, layout
- Sidebar + main pane with flexbox

- Title bar + menu bar HTML
-

Phase 2 — Interactivity (Weeks 3-4)

Week 3 — JS

`webdev-learn`: JavaScript basics

- `03-javascript/` — variables, functions, DOM
- Mini-project: interactive to-do list
- Cheatsheet: JS ↔ DOM methods

`electron-editor`: Editable textarea + keybinds

- Add `<textarea>` as the editor area
- JS: Tab key inserts spaces
- Track unsaved changes flag

Week 4 — Node.js

`webdev-learn`: Node.js & npm

- `04-nodejs/` — modules, `fs`, `path`
- Exercise: read/write files with Node
- How npm packages work

`electron-editor`: Open & save files

- IPC: renderer ↔ main process
 - `fs.readFile` / `fs.writeFile`
 - Native open/save dialogs
-

Phase 3 — Real Features (Weeks 5-6)

Week 5 — Syntax

`webdev-learn`: Async JS & APIs

- `05-async/` — promises, async/await
- Exercise: fetch a public API

- Event loop explainer

electron-editor: Syntax highlighting

- Install CodeMirror 6 via npm
- Replace textarea with CM editor
- JS + HTML modes enabled

Week 6 — Files

webdev-learn: Browser & state

- `06-state/` — localStorage, JSON
- Exercise: persist to-do list
- How Electron's main vs renderer works

electron-editor: File tree sidebar

- `fs.readdir` to list folder
 - Render file tree in sidebar
 - Click file → open in editor
-

Phase 4 — Polish & Ship (Weeks 7-8)

Week 7 — UX

webdev-learn: Tooling & DX

- `07-tooling/` — DevTools, linting, git
- ESLint + Prettier setup guide
- Git workflow cheatsheet

electron-editor: Tabs + status bar

- Multi-tab support (array of open files)
- Status bar: line/col, language
- Unsaved dot indicator on tabs

Week 8 — Ship 🚀

webdev-learn: Recap & next steps

- `08-recap/` — review of all 7 modules

- What you now know (checklist)
- Roadmap: React, TypeScript, backend

electron-editor: Package & release

- **electron-builder** config
 - Build **.exe** / **.dmg** / **.AppImage**
 - GitHub release + **v1.0.0** tag
-

What you'll have by Week 8

- A working desktop code editor with syntax highlighting, a file tree, tabs, and native open/save dialogs — packaged and releasable
- A complete learning repo covering HTML, CSS, JS, Node.js, async, state, and tooling
